

ECE 321 - Quiz #4 - Name _____

BJT Amplifiers & 2-Port Models

1) BJT Amplifier: DC Analysis. Determine the Thevenin equivalent of R1 and R2 as well as the Q-point. Assume ideal silicon transistors:

- $V_{be} = 0.7V$
- $\beta = 30$
- $R_e = 900 + 100 * (\text{your birth month}) + (\text{your birth day})$

R_e 900 + 100*mo + day	V_b	R_b	V_{ce}	I_c

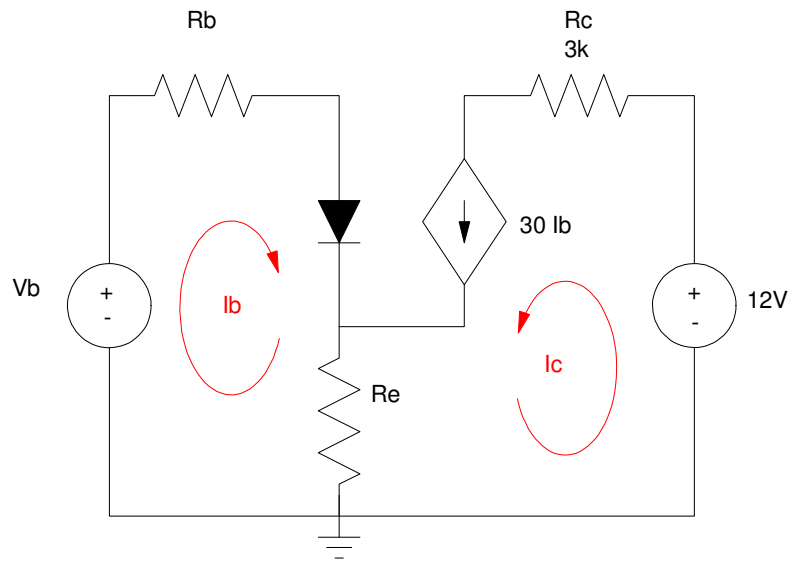

2) BJT Amplifier: DC Design. Determine R1 and R2 so that

- The Q point is $V_{ce} = 6.00V$ and
- The Q point is stabilized for variations in β

Assume

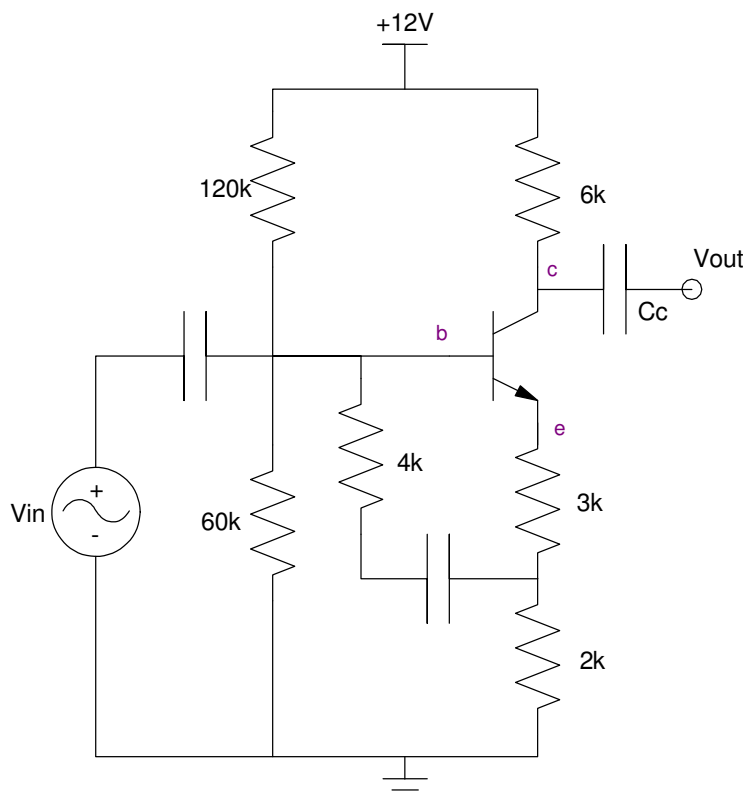

- Ideal silicon transistors ($V_{be} = 0.7V$, $\beta = 30$)
- $R_e = 900 + 100 * (\text{birth month}) + (\text{birth day})$.

R_e 900 + 100*mo + day	R1	R2	V_b	Rb

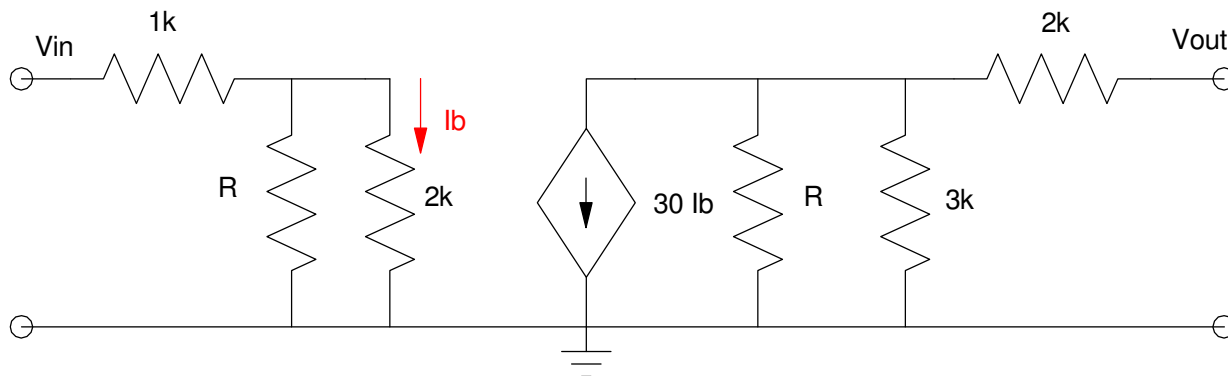

3) BJT: AC Analysis: Draw the small signal model for the following BJT amplifier. Assume

- $r_f = 2000\Omega$
- $\beta = 30$

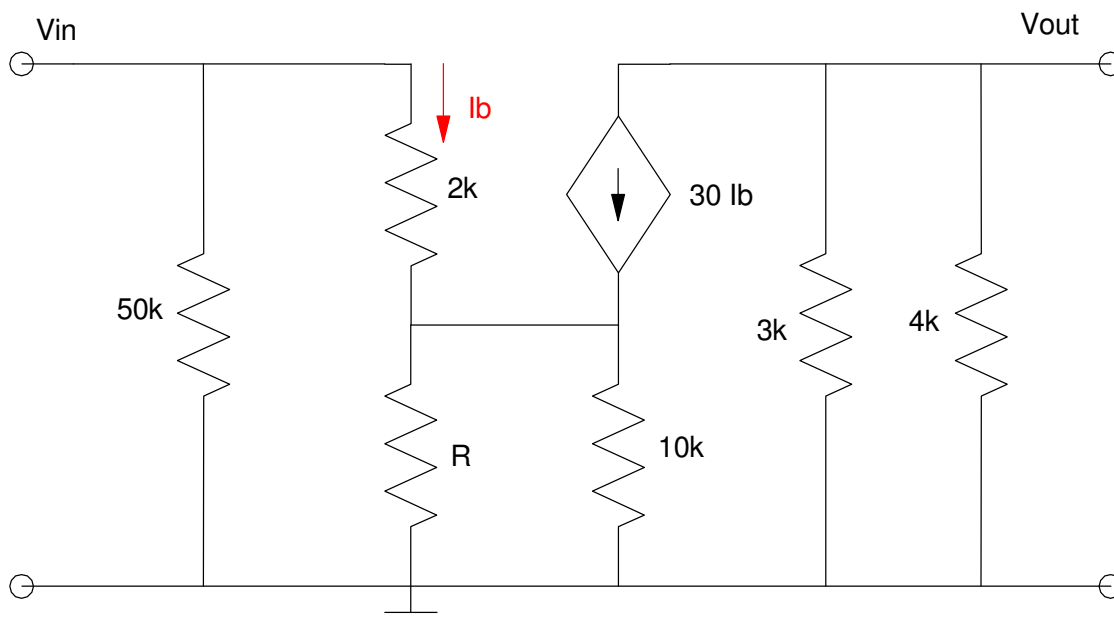

4) 2-Port Models. Determine the 2-port model for the following circuit:

R 900 + 100*mo + day	R_{in}	A_{in}	R_{out}	A_o

5) 2-Port Models. Determine the 2-port model for the following circuit:

R	R _{in}	A _{in}	R _{out}	A _o
900 + 100*mo + day				

6) Determine the 2-port model for three cascaded CE amplifiers

R $900 + 100 \cdot m_o + d_{ay}$	R_{in}	A_{in}	R_{out}	A_o
